CONTENTS

Volume 36, Issues 1–6

International Journal of
MATHEMATICAL EDUCATION in SCIENCE and TECHNOLOGY

Issue No. 1, JANUARY–FEBRUARY

Conjectures and proofs in a dynamic geometry environment A. WARES 1

Second-order van der Pol plane analysis T. H. FAY 11

Applications of differential geometry to cartography J. BENÍTEZ and N. THOME 29

Computers in abstract algebra K. K. NWABUEZE 39

Convergence of a linear recursive sequence E. G. TAY, T. L. TOH, F. M. DONG and T. Y. LEE 51

Learning statistical concepts M. AKRAM, A. J. SIDDIQUI and F. YASMEEN 65

What is first-year Mathematics students' actual knowledge about improper integrals? A. S. GONZÁLEZ-MARTÍN and M. CAMACHO 73

On the existence of a derivative continuous on a dense G_δ J. KLIPPERT and G. WILLIAMS 91

Classroom Notes

A comparison of the method of least squares and the method of averages P. GLAISTER 101

Another intuitive approach to Stirling's formula T. J. OSLER 111

The number c in Cauchy's average value theorem P. R. MERCER 118

Sawtooth functions K. HIRST 122

Maple® version of the 'Indian rope trick' D. G. KNIGHT 126

Area of convex regions as a unifying theme for the review of some topics in first-year college courses M. AMIT, M. N. FRIED and P. SATIANOV 135

An alternative approach to the total probability formula D. W. WU and L. M. BANGERTER 144

On an acoustic wave equation arising in non-equilibrium gasdynamics P. CHANDRAN 147

Recognizing exponential growth D. E. DOBBS 153

Issue No. 2, March–April

Math clubs and their potentials: making mathematics fun and exciting. A case study of a math club E. C. Papanastasiou and L. Bottiger 159

Solvers' making of drawings in mathematical problem solving and their understanding of the problem situations K. Nunokawa 173

Applications of Dirac's delta function in statistics A. I. Khuri 185

Mathematical modelling: transitions between the real world and the mathematical model R. Crouch and C. Haines 197

A genetic algorithm approach to nonlinear least squares estimation A. D. Olinsky, J. T. Quinn, P. M. Mangiameli and S. K. Chen 207

'Too much, too seldom' L. Burton, L. Falk and S. Järner 219

An investigation into the use of graphics calculators with pupils in Key Stage 2 T. Graham and P. Smith 227

On idemscalar matrices of order two L. K. Shilgba 239

Classroom Notes

An extension of Lagrange's identity to matrices G. Trenkler 245

Teaching mathematical integration: human computational skills versus computer algebra J. M. Steiner and T. Dana-Picard 249

A simple proof of an interesting Fibonacci generalization S. Falcon 259

The inscribed sphere of an n-simplex Y. A. Fiagbedzi and M. El-Gebeily 261

Compact, convex, and symmetric sets are discs M. Lynch 268

On the telescoping sum H. Chen 270

Using Platonic bodies to generate a random sample from a population having two characteristics linked with a predetermined coefficient of correlation P. Gharghouri 281

Evaluating a class of series using Taylor's theorem P. Glaister 286

Building simple hidden Markov models W.-K. Ching and M. K. Ng 296

A teaching method for the vector triple product identity A. J. B. Ward 299

On postulates of a group J. Tong 300

A note on beta function, parseval identity, and a family of integrals in non-parametric regression C. Zhang and Y. Lu 303

Variations in the solution of linear first-order differential equations B. Seaman and T. J. Osler 309

Issue No. 3, May–June

Technology-motivated teaching of topics in number theory through a tool kit approach S. Abramovich and A. Brantlinger 317

Multilevel analysis of relationship between entry qualifications and trends in degree classifications in mathematical sciences: 1994–2000 V. Simonite 335

On selective harvesting of an inshore–offshore fishery: a bioeconomic model D. Purohit and K. S. Chaudhuri 345

The correlation matrix problem in insurance and banking M. Samuels 353

A correction term for Gauss–Gegenbauer quadrature H. V. Smith 363

The Γ-algorithm and some applications E. Castillo and F. Jubete 369

Enhance-synergism and suppression effects in multiple regression S. Lipovetsky and W. M. Conklin 391

Management of a single species fishery with stage structure T. K. Kar, U. K. Pahari and K. S. Chaudhuri 403

Classroom Notes

A note on monotonicity for generalized weighted mean values Chao-Ping Chen, Zhi-Qin Wu and Feng Qi 415

On the dispersion of data in non-symmetric distributions L. Barone, G. Z. Voulgaridis and A. H. Joarder 419

Error analysis of quadrature rules P. Glaister 424

Turning points in random permutations of two kinds of distinct elements V. Hombas 432

Identities for generalized fibonacci numbers L. Monk, D. Tang and D. Brown 436

A note on the sums $1^k + (1+d)^k + (1+2d)^k + \ldots + (1+nd)^k$ Y. Inaba 440

Novel approach for solving the equation of motion of a simple harmonic oscillator N. Gauthier 446

Some notes on a functional equation Zhong-Pu Ren, Zhi-Qin Wu, Qi-Fa Zhou, Bai-Ni Guo and Feng Qi 453

Explicit closed forms for parametric integrals T. Dana-Picard 456

A note on a continued fraction technique for certain eigenvalue problems W. Robin 467

Announcement 474

Issue No. 4, July–August

Using Groups32 in instruction J. J. Wavrik 475

A brief historical introduction to fractional calculus L. Debnath 487

Student interpretations of the terms in first-order ordinary differential equations in modelling contexts D. R. Rowland and Z. Jovanoski 503

Teaching equivalence relations using collaborative activities J. E. Mills 517

Using MathCAD to teach one-dimensional graphs B. Yushau 523

Interaction: additivity plus nonlinearity? T. P. Hutchinson 531

Energy expansion for the period of anharmonic oscillators by the method of Lindstedt–Poincaré F. M. Fernández 539

Modelling the relative contribution of fasting and post-prandial plasma glucose to HbA_{1c} in healthy and type 2 diabetic subjects R. L. Ollerton, S. D. Luzio and D. R. Owens 549

Students' conceptions of, and approaches to, studying mathematics as a service subject at undergraduate level J. Macbean 553

Demonstration of systematic improvements in application of the variational method to strongly bound potentials B. Ninemire and W. N. Mei 565

Classroom Notes

Anticommutativity in rings A. B. Thaheem 585

Keep your distance! Using second-order ordinary differential equations to model traffic flow M. McCartney 588

A real integral by means of complex integration E. Capelas de Oliveira and A. O. Chiacchio 596

On Young's Inequality L. Zhu 601

Some generalizations of Rolle's theorem J. Das née Chaudhuri 604

The discrete hanging cable J. V. Peters 608

Modified Golomb algorithm for computing unit fraction expansions Yiu-Kwong Man 612

On certain properties of the regular n-simplex M. A. El-Gebeily and Y. A. Fiagbedzi 617

Letter to the Editor V. Hombas 631

Issue No. 5, September–October

Response to key issues raised in the Post-14 mathematics inquiry D. Burghes and M. Hindle 633

On the interface of probabilistic and PDE methods in a multifactor term structure theory R. S. Mamon 661

Cooperative study teams in mathematics classrooms C. Toumasis 669

Diagrams and math notation in e-learning: growing pains of a new generation G. G. Smith and D. Ferguson 681

Most-perfect pandiagonal magic squares and their Moore–Penrose inverse D. Trenkler and G. Trenkler 697

Using dynamic geometry to expand mathematics teachers' understanding of proof M. de Villiers 703

Antiderivative series for differentiable functions R. M. Howard 725

Exploring the synergies between the object oriented paradigm and mathematics: a Java led approach M. Conrad and T. French 733

On the spectrum of periodic signals A. Al-Smadi 743

Linear transformations on Pythagorean triples P. Braza, J. Tong and M.-Q. Zhan 755

Classroom Notes

Five ways to evaluate

$$\int_0^\infty \frac{\cos ax}{b^2 + x^2}\,\mathrm{d}x \qquad b \neq 0$$

P. Khalili 763

Solution sets determine differential equations D. E. Dobbs 767

Evaluation of the Laplace integral H. Chen 773

An alternative method for multiplication of rhotrices B. Sani 777

On partial fraction expansion with multiple poles S.-H. Hou and E. S.-H. Hou 782

Issue No. 6, November–December

Consistencies and inconsistencies in students' solutions to algebraic 'single-value' inequalities P. Tsamir and L. Bazzini 793

How to present it? On the rhetoric of an outstanding lecturer N. Movshovitz-Hadar and O. Hazzan 813

Theoretical branches in teaching computer science H. Habiballa and T. Kmeť 829

The structuring of initial descriptions or demonstrations in the teaching of procedures M. G. Eley and P. Norton 843

Nascent function concepts in *Nova Scientia* C. W. Groetsch 867

Modelling, simulation, animation, and real-time control (MoSART) for a class of electromechanical systems: a system-theoretic approach A. A. Rodriguez, R. P. Metzger, Jr, O. Cifdaloz, T. Dhirasakdanon and B. Welfert 877

Classroom Notes

On the sum of certain convergent series associated with the beta function J. N. NNADI 897

An application of the Kronecker product in the theory of differential systems A. SANDQVIST and K. M. ANDERSEN 902

Application of vectors to relative velocity T. TIN-LAM 906

One approach to explore a range of problem solving strategies in the classroom E. MAUCH and Y. SHI 912

Cumulant-moment relations through determinants D. S. BROCA 917

Building higher-order Markov chain models with EXCEL W.-K. CHING, E. S. FUNG and M. K. NG 921

Analysis of quadratic Diophantine equations with Fibonacci number solutions J. V. LEYENDEKKERS and A. G. SHANNON 932

On Flett's Mean Value Theorem J. TONG 936
